

Solve each problem.

1) $\frac{4}{5} - \frac{2}{4} =$

2) $\frac{4}{7} + \frac{1}{2} =$

3) $\frac{6}{9} - \frac{4}{7} =$

4) $\frac{3}{6} + \frac{1}{4} =$

5) $\frac{3}{4} - \frac{1}{2} =$

6) $\frac{2}{10} + \frac{1}{6} =$

7) $\frac{4}{8} - \frac{2}{5} =$

8) $\frac{3}{10} + \frac{1}{7} =$

9) $\frac{8}{10} - \frac{1}{5} =$

10) $\frac{6}{7} + \frac{1}{2} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{4}{5} - \frac{2}{4} = \frac{16}{20} - \frac{10}{20} = \frac{6}{20}$

2) $\frac{4}{7} + \frac{1}{2} = \frac{8}{14} + \frac{7}{14} = 1\frac{1}{14}$

3) $\frac{6}{9} - \frac{4}{7} = \frac{42}{63} - \frac{36}{63} = \frac{6}{63}$

4) $\frac{3}{6} + \frac{1}{4} = \frac{6}{12} + \frac{3}{12} = \frac{9}{12}$

5) $\frac{3}{4} - \frac{1}{2} = \frac{3}{4} - \frac{2}{4} = \frac{1}{4}$

6) $\frac{2}{10} + \frac{1}{6} = \frac{6}{30} + \frac{5}{30} = \frac{11}{30}$

7) $\frac{4}{8} - \frac{2}{5} = \frac{20}{40} - \frac{16}{40} = \frac{4}{40}$

8) $\frac{3}{10} + \frac{1}{7} = \frac{21}{70} + \frac{10}{70} = \frac{31}{70}$

9) $\frac{8}{10} - \frac{1}{5} = \frac{8}{10} - \frac{2}{10} = \frac{6}{10}$

10) $\frac{6}{7} + \frac{1}{2} = \frac{12}{14} + \frac{7}{14} = 1\frac{5}{14}$

Answers

1. $\frac{6}{20}$

2. $1\frac{1}{14}$

3. $\frac{6}{63}$

4. $\frac{9}{12}$

5. $\frac{1}{4}$

6. $\frac{11}{30}$

7. $\frac{4}{40}$

8. $\frac{31}{70}$

9. $\frac{6}{10}$

10. $1\frac{5}{14}$
