

Solve each problem.

Answers

- 1) Carol baked two brownies, but needed four total for her party. If she used seven spoonfuls of flour on each one, how much cups of flour does she still need?
- 2) Each chocolate bar in a box cost \$7. If a box had twelve bars total and Nancy sold all but seven bars, how much money would she have made?
- 3) April's discount flowers was having a sale where each rose was two dollars. If April started with sixteen roses and had seven roses left, how much money did she earn?
- 4) At a restaurant each adult meal costs \$3 and kids eat free. If a group of fourteen people came in and seven were kids, how much would it cost for the group to eat?
- 5) A worksheet had two problems on it. If a teacher had four worksheets to grade and had already graded two of them, how many more problems does she have to grade?
- 6) In a video game, each enemy defeated gives you five points. If a level has fourteen enemies total and you destroy all but five of them, how many points would you earn?
- 7) Edward earned six dollars for each lawn he mowed. If he had seventeen lawns to mow, but forgot to mow nine of them, how much money did he actually earn?
- 8) Paul invited eleven friends to a birthday party, but seven couldn't come. If he wanted to buy enough cupcakes so each person could have exactly two, how many should he buy?
- 9) At the fair Jerry bought fifteen tickets. After riding the ferris wheel he had eight tickets left. If each ticket cost two dollars, how much money did Jerry spend riding the ferris wheel?
- 10) A new building needed seventeen windows. The builder had already installed nine of them. If it takes seven hours to install each window, how long will it take him to install the rest?
